

PROFESSIONAL MICRONEEDLING + STEM CELL SCIENCE

What is Microneedling?

Microneedling creates tiny perforations in the skin which initiate a natural healing response. These perforations stimulate cells known as fibroblasts to produce new collagen and elastin resulting in firmer, healthier skin.

UNIQUE PERPENDICULAR DESIGN

ProCell perpendicular design is unique among microneedling devices. This shape provides users with increased support and control, allowing for a more precise treatment. This high quality device comes with a **LIFETIME GUARANTEE**.

PROCELL MICROCHANNEL DELIVERY SERUM

Adult Stem Cells have the ability to produce an array of cytokines and growth factors that can impact collagen remodeling through their effects on dermal fibroblasts. Procell's unique MicroChanneling Delivery Serum is composed of human bone marrow stem cell derived growth factors, cytokines and hyaluronic acid. It is formulated to safely penetrate the perforations from microchanneling and enhance production of new collagen and elastin fibers in the skin. The hero ingredient is conditioned media from human bone marrow mesenchymal stem cells (BM-MSC).

MULTI-SIZED TIPS

Multi-sized disposable tips enable faster and more even treatments of the face and body while eliminating the issues of fluid backflow and cross-contamination commonly seen with other devices.

ProCell offers 4 needle lengths and 3 tip sizes which substantially decrease treatment time, especially for larger areas.

Needles Lengths: 0.25mm, 0.50mm, 1.00mm, 1.50mm

Tips Sizes Available: Precision (12 needles), Face (25 needles), Body (49 needles)

ProCell's unique and innovative treatment technique gives your patient immediate results in skin smoothness and firmness, coupled with the long-term benefits of new natural collagen and elastin production.
