Are you a potential candidate for non-surgical hair rejuvenation treatments?

- Have you experienced a noticeable change in your hairline?
- Have you noticed thinning hair, either over the entire scalp, the temples, part or ponytail?
- Is there an increase in the amount of daily hair loss you’re experiencing?
- Do you wear hats more often due to changes in your hair?
- Do feel as though hair loss is impacting your confidence and ability to maintain a more youthful appearance?

If you answered yes to any of the above questions, then non-surgical hair rejuvenation treatments may be right for you.

SEE INSIDE FOR MORE INFORMATION.
Excessive hair loss is a common and potentially embarrassing problem that affects both men and women.

Potential causes of hair loss

Non-surgical treatment options exist for patients who require stimulation of hair growth due to hair loss conditions. These innovative treatments have the potential to help the body naturally stimulate new hair growth, thicken thinned hair, as well as slowing the progression of future hair loss.

Non-surgical hair rejuvenation treatment may:

- Awaken dormant follicles
- Provide nutrients to existing hair follicles
- Increase blood supply to the follicles
- Increase hair shaft thickness
- Trigger and maintain the growth phase
- Decrease hair loss

Women who will have noticeable hair loss by age 60
