Reprocessing a Reusable Flexible Ureteroscope:

Give your team a break!

**TIME IMPACT**

**PRE-CLEANING**
1. Wipe down scope
2. Transport scope to reprocessing room
3. Use a syringe to flush channel with cleaning detergent

**LEAK TESTING**
4. Perform a leak test

**MANUAL CLEANING**
5. Immerse scope in cleaning detergent
6. Use brush to clean surface debris
7. Use brush to remove debris from working channel
8. Use a syringe to flush channel with cleaning detergent

**RINSING**
9. Immerse scope in water and wipe down
10. Use a syringe to flush channel with water
11. Remove from water and use compressed air down the channel (or flush channel with alcohol)

**DRYING**
12. Completely dry the surface of the scope

**STERILIZATION**
13. Bring to sterilization area
14. Prepare scope in tray and wrap for sterilization
15. Sterilize cycle (1-2 hours)

**STORAGE**
16. Bring back to Storage room

START ALL OVER AGAIN!

**MAINTENANCE CHECKLIST**

Traditional Reusable Flexible Ureteroscope vs Uscope Single-Use Flexible Ureteroscope

- ★ ★ PRE-CLEANING
- ★ ★ LEAK TESTING
- ★ ★ MANUAL CLEANING
- ★ ★ RINSING
- ★ ★ DRYING
- ★ ★ STERILIZATION
- ★ ★ STORAGE

- Time consuming reprocessing cycle
- No reprocessing required!
