

Transform and scale your practice

Optimize workflow with automation

Visionix integrated devices combine multiple test functionalities in a small package—providing all necessary data for a comprehensive screening in a small footprint. The compact Eye Refract and VX 650 by Visionix can be placed on a single tabletop or separately in a five square feet pre-test room. Our 2nd generation Eye Refract offers the only computer-assisted dynamic refraction on the market. Powered by Shack-Hartmann wavefront technology and iterative and adaptive cycle testing, the Eye Refract provides consistent and repeatable refractions from anywhere in less than four minutes.

Advance your practice with the optovue OCT that practically runs itself

The Optovue iScan 80 by Visionix offers all of the scans available on a traditional OCT with the added benefit of simplified operation. Scan acquisition is as easy as positioning the patient with the assistance of iScan 80's Pupil Alignment Technology, choosing the scan and pushing start. The iScan 80 performs all of the focus and alignment operations while talking the patient through the entire exam.

Increase optical ROI with smart finishing

Briot Couture by Visionix can increase your productivity and reduce your risk of misalignment with its torque management system (TMS). Its advanced sensors and intelligent software maintain constant pressure on the lens—resulting in a beautiful 3D fit every time. Wavefront lens analysis allows any operator to read, spot, and map all lens types with precision - eliminating tedious manual preparation, ensuring accuracy, and increasing efficiency.
